ASME B30.26-2004

Rigging Hardware

Safety Standard for Cableways, Cranes, Derricks, Hoists, Hooks, Jacks, and Slings

AN AMERICAN NATIONAL STANDARD

The American Society of Mechanical Engineers

Three Park Avenue • New York, NY 10016

Date of Issuance: May 20, 2005

The next edition of this Standard is scheduled for publication in 2007. There will be no addenda issued to this edition.

ASME issues written replies to inquiries concerning interpretations of technical aspects of this Standard. Interpretations are published on the ASME Web site under the Committee Pages at http://www.asme.org/codes/ as they are issued, and will also be published within the next edition of the Standard.

FOREWORD

This American National Standard, Safety Standard for Cableways, Cranes, Derricks, Hoists, Hooks, Jacks, and Slings, has been developed under the procedures accredited by the American National Standards Institute (formerly the United States of America Standards Institute). This Standard had its beginning in December 1916 when an eight-page Code of Safety Standards for Cranes, prepared by an ASME Committee on the Protection of Industrial Workers, was presented to the annual meeting of the ASME.

Meetings and discussions regarding safety on cranes, derricks, and hoists were held from 1920 to 1925, involving the ASME Safety Code Correlating Committee, the Association of Iron and Steel Electrical Engineers, the American Museum of Safety, the American Engineering Standards Committee (later changed to American Standards Association and subsequently to the USA Standards Institute), Department of Labor — State of New Jersey, Department of Labor and Industry — State of Pennsylvania, and the Locomotive Crane Manufacturers Association. On June 11, 1925, the American Engineering Standards Committee approved the ASME Safety Code Correlating Committee's recommendation and authorized the project with the U.S. Department of the Navy, Bureau of Yards and Docks, and ASME as sponsors.

In March 1926, invitations were issued to 50 organizations to appoint representatives to a Sectional Committee. The call for organization of this Sectional Committee was sent out October 2, 1926, and the committee organized November 4, 1926, with 57 members representing 29 national organizations. The Safety Code for Cranes, Derricks, and Hoists, ASA B30.2-1943, was created from the eight-page document referred to in the first paragraph. This document was reaffirmed in 1952 and widely accepted as a safety standard.

Due to changes in design, advancement in techniques, and general interest of labor and industry in safety, the Sectional Committee, under the joint sponsorship of ASME and the Naval Facilities Engineering Command, U.S. Department of the Navy, was reorganized as an American National Standards Committee on January 31, 1962, with 39 members representing 27 national organizations.

The format of the previous code was changed so that separate standards (each complete as to construction and installation; inspection, testing, and maintenance; and operation) will cover the different types of equipment included in the scope of B30.

In 1982, the Committee was reorganized as an Accredited Organization Committee, operating under procedures developed by the ASME and accredited by the American National Standards Institute.

This Standard presents a coordinated set of rules that may serve as a guide to government and other regulatory bodies and municipal authorities responsible for the guarding and inspection of the equipment falling within its scope. The suggestions leading to accident prevention are given both as mandatory and advisory provisions; compliance with both types may be required by employers of their employees.

In case of practical difficulties, new developments, or unnecessary hardship, the administrative or regulatory authority may grant variances from the literal requirements or permit the use of other devices or methods, but only when it is clearly evident that an equivalent degree of protection is thereby secured. To secure uniform application and interpretation of this Standard, administrative or regulatory authorities are urged to consult the B30 Committee, in accordance with the format described in Section III, before rendering decisions on disputed points.

This volume of the Standard, which was approved by the B30 Committee and by ASME, was approved by ANSI and designated as an American National Standard on December 2, 2004.

Safety codes and standards are intended to enhance public safety. Revisions result from committee consideration of factors such as technological advances, new data, and changing environmental and industry needs. Revisions do not imply that previous editions were inadequate.

ASME B30 STANDARDS COMMITTEE
Safety Standards for Cableways, Cranes, Derricks, Hoists, Hooks, Jacks, and Slings

(The following is the roster of the Committee at the time of approval of this Standard.)

STANDARDS COMMITTEE OFFICERS

P. S. Zorich, *Chair*
B. D. Closson, *Vice Chair*
J. D. Wendler, *Secretary*

STANDARDS COMMITTEE PERSONNEL

N. E. Andrew, Northrop Grumman Ship Systems
W. T. Hargrove, *Alternate,* ManTech International Corp.
R. E. Bluff IV, Gantry Constructors, Inc.
R. J. Bolen, Consultant
G. B. Hetherston, *Alternate,* E. I. DuPont
A. D. Brown, A. D. Brown, Co.
D. Ritchie, *Alternate,* The Construction Safety Council
T. A. Christensen, Alliance of American Insurers/Liberty Mutual Insurance
M. W. Mills, *Alternate,* Liberty Mutual Group
B. D. Closson, Craft Forensic Services, Inc.
T. L. Blanton, *Alternate,* NACB Group, Inc.
S. Cloutier, U.S. Department of Labor
J. P. Colletti, John P. Colletti & Associates, Inc.
R. M. Lovgren, *Alternate,* Crane Partner International
R. A. Dahlin, Walker Magnetics Group
J. W. Downs, Jr., *Alternate,* Downs Crane and Hoist Co.
L. D. DeMark, International Union of Operating Engineers
S. C. Buck, *Alternate,* International Union of Operating Engineers
D. W. Eckstine, Eckstine and Associates
R. J. Edwards, Schwing America, Inc.
D. R. Remus, *Alternate,* Reed Manufacturing
R. H. Fowler, U.S. Department of the Air Force
J. L. Franks, Consultant
R. C. Slater, *Alternate,* McKay International Engineering
J. L. Gordon, Acco Chain and Lifting Products
N. C. Hargreaves, Terex Corp./Power Crane & Shovel Association
E. D. Fidler, *Alternate,* Grove Worldwide
J. J. Headley, Crane Institute of America
R. M. Parnell, *Alternate,* Industrial Training International
C. W. Ireland, National Oilwell
A. Egging, *Alternate,* National Oilwell
L. S. Johnson, American Equipment Co.
E. P. Vliet, *Alternate,* Nichols Construction Co.
R. M. Kohner, Landmark Engineering Service
H. I. Shapiro, *Alternate,* Specialized Carriers and Rigging Association/ Howard I. Shapiro & Associates
C. E. Lucas, The Crosby Group
P. A. Boeckman, *Alternate,* The Crosby Group
E. K. Marburg, Columbus-McKinnon Corp.
M. G. Miller, *Alternate,* Columbus McKinnon Corp.
L. D. Means, Means Engineering and Consulting/Wire Rope Technical Board
D. M. Sleightholm, *Alternate,* Bridon America Corp.
K. J. Miller, Jacobs Engineering
D. W. Smith, *Alternate,* Chicago Bridge and Iron Co.
G. L. Owens, Granite Construction, Inc.
J. T. Perkins, Ingersoll-Rand
H. G. Leidich, *Alternate,* Ingersoll-Rand
J. E. Richardson, U.S. Department of the Navy
W. P. Rollins, Manitowac Crane Group
M. E. Brunet, *Alternate,* Manitowoc Crane Group
J. W. Rowland III, Consultant
E. E. Rudy, U.S. Department of the Army
J. C. Ryan, Boh Bros. Construction Co.
A. R. Ruud, *Alternate,* Atkinson Construction
D. Sayenga, Associated Wire Rope Fabricators
D. J. Bishop, *Alternate,* Bishop Lifting Products, Inc.
G. W. Shields, Caterpillar, Inc.
W. J. Smith, Jr., Maxim Crane Works
R. G. Strain, Advanced Automation Associates, Inc.
J. B. Hamill, *Alternate,* Advanced Automation Associates, Inc.
A. R. Toth, Morris Material Handling
B. E. Weir, Jr., National Erectors Association/Norris Brothers Co., Inc.
J. Conant, *Alternate,* Conant Crane Rental Co.
J. D. Wendler, The American Society of Mechanical Engineers
R. C. Wild, U.S. Army Corps of Engineers
S. G. Testerman, *Alternate,* U.S. Army Corps of Engineers
D. N. Wolff, National Crane Corp.
A. L. Calta, *Alternate,* National Crane Corp.
P. S. Zorich, RZP International Ltd.
H. W. Fair, *Alternate,* H. Fair Associates, Inc.

HONORARY MEMBERS

J. M. Klibert, Lift-All Co., Inc.
R. W. Parry, Consultant

B30.26 SUBCOMMITTEE PERSONNEL

C. E. Lucas, *Chair,* The Crosby Group
N. E. Andrew, Northrop Grumman Ship Systems
D. J. Bishop, Bishop Lifting Products
D. R. Decker, Navy Crane Center
D. W. Eckstine, Eckstine & Associates
W. R. Emberger, Peco Energy
J. J. Headley, Crane Institute of America
M. W. Mills, Liberty Mutual Group
R. M. Parnell, Industrial Training International
G. L. Rammelsberg, Columbus-McKinnon — Midland Forge
D. Sayenga, Associated Wire Rope Fabricators
M. J. Secrist, Ulven Forging
K. Sellers, Gunnebo-Johnson
D. W. Smith, Chicago Bridge & Iron
P. D. Sweeney, General Dynamics Electric Boat
B. D. Todd, Campbell Chain

SAFETY STANDARD FOR CABLEWAYS, CRANES, DERRICKS, HOISTS, HOOKS, JACKS, AND SLINGS

B30 STANDARD INTRODUCTION

GENERAL

This Standard is one of a series of safety standards on various subjects that have been formulated under the general auspices of the American National Standards Institute. One purpose of the Standard is to serve as a guide to governmental authorities having jurisdiction over subjects within the scope of the Standard. It is expected, however, that the Standard will find a major application in industry, serving as a guide to manufacturers, purchasers, and users of the equipment.

For the convenience of the user, the Standard has been divided into separate volumes.

B30.1 Jacks
B30.2 Overhead and Gantry Cranes (Top Running Bridge, Single or Multiple Girder, Top Running Trolley Hoist)
B30.3 Construction Tower Cranes
B30.4 Portal, Tower, and Pedestal Cranes
B30.5 Mobile and Locomotive Cranes
B30.6 Derricks
B30.7 Base Mounted Drum Hoists
B30.8 Floating Cranes and Floating Derricks
B30.9 Slings
B30.10 Hooks
B30.11 Monorails and Underhung Cranes
B30.12 Handling Loads Suspended From Rotorcraft
B30.13 Storage/Retrieval (S/R) Machines and Associated Equipment
B30.14 Side Boom Tractors
B30.15 Mobile Hydraulic Cranes
(NOTE: B30.15-1973 has been withdrawn. The revision of B30.15 is included in the latest edition of B30.5.)
B30.16 Overhead Hoists (Underhung)
B30.17 Overhead and Gantry Cranes (Top Running Bridge, Single Girder, Underhung Hoist)
B30.18 Stacker Cranes (Top or Under Running Bridge, Multiple Girder With Top or Under Running Trolley Hoist)
B30.19 Cableways
B30.20 Below-the-Hook Lifting Devices
B30.21 Manually Lever Operated Hoists
B30.22 Articulating Boom Cranes
B30.23 Personnel Lifting Systems
B30.24 Container Cranes[1]
B30.25 Scrap and Material Handlers
B30.26 Rigging Hardware
B30.27 Material Placement Systems[1]
B30.28 Balance-Lifting Units[1]

If these standards are adopted for governmental use, the references to other national codes and standards in the specific volumes may be changed to refer to the corresponding regulations of the governmental authorities.

The use of cableways, cranes, derricks, hoists, hooks, jacks, and slings is subject to certain hazards that cannot be met by mechanical means but only by the exercise of intelligence, care, and common sense. It is therefore essential to have personnel involved in the use and operation of equipment who are competent, careful, physically and mentally qualified, and trained in the safe operation of the equipment and the handling of the loads. Serious hazards are overloading, dropping or slipping of the load caused by improper hitching or slinging, obstructing the free passage of the load, and using equipment for a purpose for which it was not intended or designed.

The Standards Committee fully realizes the importance of proper design factors, minimum or maximum sizes, and other limiting dimensions of wire rope or chain and their fastenings, sheaves, sprockets, drums, and similar equipment covered by the Standard, all of which are closely connected with safety. Sizes, strengths, and similar criteria depend on many different factors, often varying with the installation and uses. These factors depend on the condition of the equipment or material; the loads; the acceleration or speed of the ropes, chains, sheaves, sprockets, or drums; the type of attachments; the number, size, and arrangement of sheaves or other parts; environmental conditions causing corrosion or wear; and many variables that must be considered in each individual case. The rules given in the Standard must be interpreted accordingly, and judgment must be used in determining their application.

The Standards Committee will be glad to receive criticisms of this Standard's requirements and suggestions

[1] B30.24, B30.27, and B30.28 are in the developmental stage.

for its improvement, especially those based on actual experience in application of the rules.

Suggestions for changes to the Standard should be submitted to the Secretary of the B30 Committee, ASME, Three Park Avenue, New York, NY 10016-5990, and should be in accordance with the following format:

(*a*) Cite the specific paragraph designation of the pertinent volume.

(*b*) Indicate the suggested change (addition, deletion, revision, etc.).

(*c*) Briefly state the reason and/or evidence for the suggested change.

(*d*) Submit suggested changes to more than one paragraph in the order that the paragraphs appear in the volume.

The B30 Committee will consider each suggested change in a timely manner in accordance with its procedures.

SECTION I: SCOPE OF B30 STANDARD

This Standard applies to the construction, installation, operation, inspection, maintenance, and safe use of lifting equipment used in construction and industrial settings. This includes, but is not limited to: articulating-boom, container, gantry, mobile, pedestal, portal, tower and stacker cranes; balance-lifting units; below-the-hook lifting devices; cableways; derricks; jacks; hoists; hooks; loads suspended from rotorcraft; material placement systems; monorails; rigging hardware; and scrap and material handlers.

This Standard does not apply to track and automotive jacks, railway or automobile wrecking cranes, shipboard cranes, shipboard cargo-handling equipment, well-drilling derricks, skip hoists, mine hoists, truck body hoists, car or barge pullers, conveyors, excavating equipment, or equipment falling within the scope of the following Committees: A10, A17, A90, A92, A120, B20, B56, and B77.

SECTION II: PURPOSE

This Standard is designed to

(*a*) guard against and minimize injury to workers, and otherwise provide for the protection of life, limb, and property by prescribing safety requirements

(*b*) provide direction to owners, employers, supervisors, and others concerned with, or responsible for, its application

(*c*) guide governments and other regulatory bodies in the development, promulgation, and enforcement of appropriate safety directives

SECTION III: INTERPRETATIONS

Upon request, the B30 Committee will render an interpretation of any requirement of the Standard. Interpretations can only be rendered in response to a written request sent to the Secretary of the B30 Committee, ASME, Three Park Avenue, New York, NY 10016-5990.

The request for interpretation should be clear and unambiguous. It is further recommended that the inquirer submit his request utilizing the following format.

Subject: Cite the applicable paragraph number(s) and provide a concise description.

Edition: Cite the applicable edition of the pertinent volume for which the interpretation is being requested.

Question: Phrase the question as a request for an interpretation of a specific requirement suitable for general understanding and use, not as a request for approval of a proprietary design or situation. The inquirer may also include any plans or drawings that are necessary to explain the question; however, they should not contain any proprietary names or information.

Requests that are not in this format will be rewritten in this format by the Committee prior to being answered, which could change the intent of the original request.

ASME procedures provide for reconsideration of any interpretation when or if additional information that might affect an interpretation is available. Further, persons aggrieved by an interpretation may appeal to the cognizant ASME Committee or Subcommittee. ASME does not "approve," "certify," "rate," or "endorse" any item, construction, proprietary device, or activity.

SECTION IV: NEW AND EXISTING INSTALLATIONS

(*a*) *Effective Date.* The effective date of this volume for the purpose of defining new and existing installations shall be 1 year after its date of issuance.

(*b*) *New Installations.* Construction, installation, inspection, testing, maintenance, and operation of equipment manufactured and facilities constructed after the effective date of this volume shall conform to the mandatory requirements of this volume.

(*c*) *Existing Installations.* Inspection, testing, maintenance, and operation of equipment manufactured and facilities constructed prior to the effective date of this volume shall be done, as applicable, in accordance with the requirements of this volume.

It is not the intent of this volume to require retrofitting of existing equipment. However, when an item is being modified, its performance requirement shall be reviewed relative to the current volume. If the performance differs substantially, the need to meet the current requirement shall be evaluated by a qualified person selected by the owner (user). Recommended changes shall be made by the owner (user) within 1 year.

SECTION V: MANDATORY AND ADVISORY RULES

Mandatory rules of this Standard are characterized by use of the word *shall*. If a provision is of an advisory nature, it is indicated by use of the word *should* and is a recommendation to be considered, the advisability of which depends on the facts in each situation.

SECTION VI: METRIC CONVERSIONS

This Standard contains SI (metric) units as well as U.S. Customary units. The values stated in U.S. Customary units are to be regarded as the standard. The SI units are a direct (soft) conversion from the customary units.

RIGGING HARDWARE

Chapter 26-0
Scope, Definitions, and References

SECTION 26-0.1: SCOPE

Volume B30.26 includes provisions that apply to the construction, installation, operation, inspection, and maintenance of detachable rigging hardware used for lifting purposes in conjunction with equipment described in other volumes of the B30 Standard. This hardware includes shackles, links, rings, swivels, turnbuckles, eyebolts, hoist rings, wire rope clips, wedge sockets, and rigging blocks. Use of the same hardware for purposes other than lifting is excluded from the provisions of this Volume.

SECTION 26-0.2: DEFINITIONS

abnormal operating conditions: environmental conditions that are unfavorable, harmful, or detrimental to or for the operation of a piece of detachable hardware, such as excessively high or low ambient temperatures; exposure to weather; corrosive fumes; dust laden or moisture laden atmospheres; and hazardous locations.

angle of loading: the acute angle between horizontal and the leg of the rigging, often referred to as the horizontal angle.

bow, shackle: the curved portion of the shackle body opposite the pin, often referred to as the bail, the body, the dee, or the bowl (see Fig. 3).

dead end: the section of wire rope that is not tensioned under load (see Figs. 10 and 11).

design factor: ratio between nominal or minimum breaking strength and rated load of the rigging hardware.

designated person: a person who is selected or assigned by the employer or employer's representative as being competent to perform specific duties.

ears, shackle: portion of the shackle body which supports the shackle pin (see Fig. 3).

hardware service:

normal: service that involves use of loads at or below the rated load.

severe: service that involves normal service coupled with abnormal rigging or operating conditions.

special: service that involves operation, other than normal or severe, which is approved by a qualified person.

hitch, choker: a method of rigging a sling in which the sling is passed around the load, then through one loop eye, end fitting, or other device with the other loop eye or end fitting attached to the lifting device.

in-line loading: condition where the load is applied through the centerline of the rigging hardware at the intended bearing points.

jaw: a U-shaped load bearing connection, designed for use with a removable pin (see Fig. 5).

line pull: the tension load in a rope entering a rigging block (see Fig. 17).

live end: the section of wire rope that is tensioned under load. (see Figs. 10 and 11).

manufacturer: The entity responsible for the physical production of an item.

pin, shackle: a steel bolt made to span the two shackle ears (see Fig. 3).

primary load fitting: the fitting on a rigging block that carries the highest applied load during use (see Fig. 17).

proof load: the specific load applied in performance of the proof tests.

proof test: a nondestructive load test made to a specific multiple of the rated load of the rigging hardware.

qualified person: a person who, by possession of a recognized degree in an applicable field or certificate of professional standing, or who, by extensive knowledge, training, and experience, has successfully demonstrated the ability to solve or resolve problems relating to the subject matter and work.

rated capacity: refer to rated load.

rated load: the maximum allowable working load established by the rigging hardware manufacturer. The terms "rated capacity" and "working load limit" are commonly used to describe rated load.

saddle: the base of a wire rope clip (see Fig. 10).
